TITLE: Toll free calling account recharge system and method

Abstract Paragraph:

A calling account recharge system, method, and device are provided. The device has an associated stored-value calling account, and typically includes a selector, a communications program configured to communicate with a recharge service via a communication network, and a recharge option selectable by a user upon actuation of the selector. The recharge option is configured to cause the communications program to initiate a recharge transaction with the recharge service via the communication network, in order to add calling units to the stored-value calling account. The device may be configured to access the communication network via a toll-free gateway.

Summary of Invention Paragraph:

[0007] A calling account recharge system, method, and device are provided. The device has an associated stored-value calling account, and typically includes a selector, a communications program configured to communicate with a recharge service via a communication network, and a recharge option selectable by a user upon actuation of the selector. The recharge option is configured to cause the communication program to initiate a recharge transaction with the recharge service via the communication network, in order to add calling units to the stored-value calling account.

Summary of Invention Paragraph:

[0011] The system typically includes a recharge server connected to a communication network. The recharge server is configured to perform a recharge transaction on a stored-value telephone calling account. The recharge system also typically includes a web-enabled wireless telephone device having a recharge option installed thereon, the recharge option being selectable by a user upon actuation of a user input device on the wireless telephone device. The recharge option is further configured to cause a communication program on the wireless telephone device to initiate a recharge transaction with the recharge server via a communication network, in order to add calling units to the stored-value calling account.

Brief Description of Drawings Paragraph:

[0012] FIG. 1 is schematic view of a stored-value account recharge system according to one embodiment of the invention, showing a recharge option linking a wireless telephone device and a recharge service, the recharge option being activated by a selector.

Brief Description of Drawings Paragraph:

[0014] FIG. 3 is schematic view showing an exemplary hierarchy of mechanisms that
